MINIMISING OUR IMPACT

FAR REACHING

Wherever SUEK operates, we take care to minimise our impact on the local environments with which we interact. Looking to balance commercial interests with ecological considerations, we aim to tread responsibly as we move forward.

DEEPLY INVOLVED

Through efficiency measures such as methane utilisation, coal washing, dust control, land reclamation and other measures, we take responsibility for our actions and try to reduce our environmental footprint. We also seek to meet the demand for innovative technologies for the production of cleaner, high-grade coal.

397ha

of land restored
by SUEK in 2016
